think big and live
your dream;
passion gives energy ”**

Welcomes All

I take great pleasure to welcome you all to the Graduation Ceremony of Sahyadri College of Engineering & Management.

On this occasion we are extremely happy and delighted to have "A" grade visionary leader with vast experience in the IT Industry, Mr. Nagaraj Ijari, Vice President, Global Head-HiTech Industry Solutions Unit, Head- TCS Bangalore Operations as Chief Guest of this august function. On behalf of Sahyadri College of Engineering & Management, I extend a warm welcome to Mr. Nagaraj Ijari. We have another distinguished personality, Mr. E. S. Chakravarthy, Centre Head - TCS Bangalore. Mr. Chakravarthy is a well wisher of our institute and a great motivator. He has visited our college a number of times, we are extremely happy to have Mr. Chakravarthy as a guest of honor for the Graduation day ceremony.

I extend a warm welcome to him. Our Chairman, Mr. Manjunath Bhandary, is the main architect of this

institution, because of his visionary leadership, proactive role, the college has made its presence felt. I extend a warm welcome to him.

It is a pleasure to welcome our Director Dr. D. L. Prabhakara, Principal Dr. U. M. Bhushi, , Dean-Academics Prof. J V Gorabal , Heads of Departments, Secretary of the Bhandary Foundation, Mrs. Prasanna Bhandary, Distinguished Guests, Members of the Staff, Graduates, Parents, Members of the Press, Ladies and Gentlemen to this seventh graduation function.

Now I would like to extend a warm welcome to our graduates who are stepping out of the portals of this great institution after successfully completing their course and carrying a big stack of sweet memories of Sahyadri, to play a big role in shaping their bright future. I extend a warm welcome to members of the press, who are present here to give wide coverage.

The Chief Guest Speaks - Mr. Nagaraj Ijari

Mr. Nagaraj Ijari - Invitees, Parents, Press and my dear young students, it is my pleasure and honor to be present here on this day to address the seventh graduation day. Today, I thank the management of this institute for inviting me on this very important occasion. This is a great institute of technology for education. The hard work, the focus, the passion, the energy, I see in this institute is unbelievable. The passion with which the chairman showed me around the campus, I can see the vision in front of him to take this college to a much higher level.

Sahyadri means benevolent, Sahyadri means warm hearted, Sahyadri means kind hearted, Sahyadri means big hearted. I can see all that from the time I entered this campus, till now. That is Great! Keep continuing with the passion, keep continuing with the energy.

Now my dear young students, you are the stars today, and it is a very special day for all of you. It is a

memorable milestone in your life. You are seeing the result of your hardwork and dedication today your parents, teachers, friends and well wishers are very proud of your achievement. This institution has laid the foundation for your learning and I am sure this is not going to end here. You are all very lucky as technological revolution is happening in a big way, which is also known as digital revolution.

This revolution is happening across the industries whether it is manufacturing, IT, banking, health-care and automobiles, everywhere it is happening. Everyone is talking about connected devices or in other words, internet of things. Plenty of opportunities for solving the problems of society. Society is going through so many problems. Again you will be privileged in solving these kinds of problems. This means, huge opportunity for all of you. All of you are going to actively participate in this digital revolution.

The Seventh Graduation Day for the passed out 2016-17 batch of Engineering students was held in the Campus.

So while you are entering the next phase of your life, it will be useful to ponder over the following points: First of all its values, always be guided by higher values, need to build integrity, respect for individuals in value system. Everyday is a learning day, if you are not learning something in a day; you should be feeling that something is missing in life that day. Each day you should look at learning at least one thing, then it will be at least 365 learning in a year. Learning is a continuous process, don't leave it. You are not going to get very far in life if based on what you already know. You are going to advance in life, but what you are going to learn from now on, something of positively, innovation and out of the box thinking. Nothing is impossible in the world. If I ask you to breathe under water for a long time, what will be the immediate answer? "Under water for a long time?" that is just impossible but if you use a snorkel, Oxygen tank or if you get into a sub marine, it is possible. All that is required is finding ways to make things possible. Impossible should not be there in your dictionary, positive mindset, innovation and out of the box thinking all will help you to solve different problems in different situations, there is always a solution for simple and complex problems. Do not give up, do not get frustrated, do not get stressed out, you will solve the problem.

Then something about dreaming, you should always dare to dream, never think of small things, dream big, think big, live your dreams and follow your heart, you will be successful. Enjoy your work, any work we get, should be felt that we are lucky enough as we are getting some work, enjoy that work, and execute that work with passion. Passion will give you more energy; energy will help you solve the problems. At the same time, don't be very individualistic, be part of the team, have the spirit of team work. Collaborate with the entire stake holders that will help you succeed much faster, that will also help you succeed with the team, empower your team, and learn the art of delegation. Do not think that one can alone solve the problems of the world. There is a team with you, which can help in solving the problem, but you need to delegate that work to the team. Create your own path. I heard some talk about leadership, just before my speech, leave your footprints, don't follow, be the leader, focus on developing leaders, focus on coaching, focus on mentoring, for the reason that, you are here today just because someone has mentored you, coached you and taken care of you. And also success is extremely important, but very little learning's in success, failure helps one to learn more and also helps to think differently.

If you have to be happier, you have to give back to the society. You know that if you have to be here again, today society has helped you to be here. It is always great to give back to the society in whatever way you can. If you are going to create your team, organization, family, society is the differentiator for you. And that is how you are remembered. If you have to be remembered, we need to make sure that your faculty, your parents, your friends, your

relatives, your society is taken care. Then you will always be remembered, even if you are not there in this city, if you are gone anywhere in India or anywhere outside India, you will always be remembered for that. At the same time, however successful you are, however great position you have achieved, do not forget the roots, your roots are very important. Your parents have worked very hard for so many years, not just a day, all these years to make you successful and to make you come and collect your graduation certificate, here today on the stage. When you joined the profession, make sure that you remember them, talk to them, respect them, and be guided by them. Becoming a great professional and also if you want to be happy in life, it is very difficult. Either you can be happy in life, or you can become a great professional, but there are some formulas in life, wherein you can do great justice to life and great justice to the family and one's own life. All the hard work and efforts are put in to be happy. Do not forget that. Hence it is better to invest in technology, which is pervasive, without a smart phone, you feel that there is nothing in life.

Invest in learning the domain, whichever field you are in. In the automobile field, learn the domain intensely, deeply. Invest in relationships, invest in time with family, and invest in time with friends that will help you a lot. Investing time in society is extremely important, you are all lucky to be graduates here today but there are so many people who would like to be graduates. You can think and see, as to how you can help them out, it will keep you happy, at the same time, professional life is important, technology is important domain, but one needs to invest in their personal health, fitness and well being. If you practice at least some of these points in your everyday life there is absolutely no doubt that you will be a very successful person. In conclusion, a great thing is that India is doing extremely well and the future is much more brighter than all of you. Everyone of you have got an opportunity to transfer this to society. You are going to play a key role in shaping the future of our country, India.

Wishing you all wisdom, success and sense of fulfillment. Wishing you all the best in fulfilling your dreams and achieving the goals in life.

Thank you!

“ At the same time, don't be very individualistic, be part of the team, have the spirit of team work. ”

The Guest of Honor Speaks - Mr. E S Chakravarthy

Boys & Girls of Communicative Electronics & Communication Engineering, Boys & Girls of civilized civil engineering, Boys & Girls of Informative Information Science & Engineering, and lastly and very importantly Boys & Girls of Computerized Computer Science & Engineering. Very Good evening and Congratulations for successfully completing your engineering education from the most wanted engineering institute of Namma Karnataka's Sahyadri. On this occasion, in addition to all the Boys & Girls let me Congratulate all the parents and teachers because of whom what we are today. On this occasion, let me quote this simple word, and the word is **SPT (S stands for students of SCEM, P for parents and T for teachers of the students of Sahyadri)**. Together stands for me as Super Performing Teams of Namma Karnataka and namma India. For last 4 years and close to 8 semesters, you have been hearing lectures after lectures and you are going to hear me for next 10 minutes and bear with me. Most of my words and

references, I shall take from Manjunath Bhandary Sir and Mr. Nagaraj Ijari Sir. Ans I also clubbing 44 years of my existence on this Mother India and Twenty years of my experience in my TCS, also working with legends like Mr. Nagaraj Ijari, I am going to share thoughts to you.

In speech he referred to very powerful word, Energy, Boys & Girls never ever forget this word Energy in your life. Energy is the source of success for you, for me and for all of us. That is the place where I would like to introspect and give you some nice inputs. As I said, energy is the source of success for your life, and I request all of you, to gather and to gain energy from 4 different dimensions, No. 1 Physical energy- is the most important energy for our success. Never ever loose your fitness, life and smile on that face all together is the physical energy that you exhibit. Your safety and security is most important for your family members and your safety and your security is important for us and for that matter, every engineering graduate's safety is important for our country. Wherever you go, whatever you do, keep

yourself safe and secured and the smile is an indication of progress, smile is an indication of confidence and smile is an indication of well being. Never ever loose it and you will be physically energized everyday.

The second energy I will talk about, I introspect from Manjunath Bhandary Sir, 10 years back we met, and I came to this college in 2012, on that day, after he met me in the college, he converted my name E S Chakravarthy into Chakku and that is the introspection which I say, the energy is called as emotional energy, which is going to make all of you and me successful in our lives. Emotional energy is the most important energy, what Mr. Nagaraj Ijari mentioned in his key note address. I will give you simple tips, very simple tips, Boys & Girls which I have been practicing for many years and which also made me taste a bit of success in my life. When you speak with your motherspeak with love and affection, you get that emotional energy. When you speak to your father and teachers, speak with accountability and responsibility. You get the emotional energy. I am sure in the next couple of years, all of you are going to get married and I wish you all the best, and that needs more luck than anything else. When you interact with your spouse, do it with transparency and honesty. You will get the emotional energy and later when you interact with your kids, do with high levels of enthusiasm, you get emotional energy and to your colleagues in the profession, or in your own business, or if you become a research scholar, when you interact with your colleagues, interact with belongingness that gives you tremendous amount of emotional energy. The last two most powerful things and very difficult to do in life, when we want to interact with the god, we have to interact with silence and that gives you emotional energy. When you interact with yourself, interact or speak to yourself, with high levels of self confidence and that gives you emotional energy. You can hit the success, if you have emotional energy in your pocket.

Never ever forget these tips that I gave you. Especially with mother and father, what Mr. Ijari mentioned, today they are young and you are young and everything looks good. From today you are going to see much more success than your parents, infact every parent sitting at the backside, want you to become much more successful than them. In fact they are the only two entities in the World, who always think about your success, teachers and parents. Once they get old and that is exactly what Ijari Sir is trying to mention to

them. Remember, all your childhood days, and your youthful days the way they supported the way they cared, the way they have given tremendous amount of love and affection give it back to them because at the old age, they become the children of you and me as parents of us. That is what emotional energy is.

I am only going to speak about four energies, for four directions, North, East, South, West, the third energy is very important, "Mind Energy" and here I would like to draw attention on what Mr. Manjunath Bhandary Sir spoke, he said there are plenty of opportunities. He made a couple of statements on opportunities, underline it, and before I go further on this, I love to wish all of you, National Doctor's Day of 2017. You might be wondering, Why Mr. Chakravarthy being an engineer, Ofcourse I am proud that I am an engineer; I did my B.Tech and Masters in Computer Science. Why he is greeting all of us on a Doctor's day, behind every prescription behind every diagnosis and behind every

surgery they perform, there is a technology behind it and there is an engineer behind the technology and hence the world runs on Doctors and Engineers creating solutions and services. Have you ever imagined an engineer congratulating an engineer on Doctors day and that is the kind of opportunities we have. Mr Ijari sir rightly mentioned in his words, you take any industry segments opportunities are plenty because the technology plays a very important role, and hence engineers have an enormous amount of opportunities. Both the legendary people of the college and the TCS spoke on that which requires mind energy.

What exactly is mind energy? The certificate that you hold is a certificate of trust, that Mr. X, Y can be trusted. Beyond that, the actual journey starts today. Infact you are thinking that after your B.Tech degree your learning is over, but instead I will tell you, the actual learning starts after B.Tech degree. When you get into the life outside for that mind energy always gathers and gains. You know what it means by mind energy? It is just the matter of intelligence. I am sure many people would have defined what intelligence is. But I will define in simple English, Intelligence is your ability to gather knowledge, skill and apply to solve the problem. For the last twenty years have been working with Mr. IJARI as a kid for the last twenty years have observed him saying, solve as many problems as possible as engineering technocrats. Absolutely, go after problems there is a need for every problem that has to be solved, and go after it. Problem solving is the source of mind energy for technocrats of 21st century.

The last energy is very important called as inner energy. What you feel in your heart and how does the heart generate that energy everyday is the inner energy. Three simple tips I can give you, No 1. as both of them mentioned, keep contributing something back to the society that we belong to and that gives a tremendous amount of inner satisfaction, which is the source of your inner energy. Always do something to

the society we belong to, it not necessarily be a financial help, you can provide effort, you can go and coach people, you can mentor people, you can contribute to the planet that we belong to, and you can solve the problems that the society is going through. The reason am referring to these two legends on the ideas much more is, what we are today is because of what directions they have set for our future. Hence I am referring to their statements more actively. One more very interesting tip I can give you is that, you think with the mind, but do with the heart. Anything that you think with the mind and do with the heart will give you that passion, which in turn gives you the inner energy.

The last thing and I am done here. As I said 11 minutes and I am going to close it, you end up doing a job. When I say a job it can be your professional life, it can be as a research scholar or you might become a teacher, you might become something of your own, entrepreneur, everything is a target or a job. Please remember the words carefully, people love to do a job because they like it, people love to do a job because they are good in doing it, people love to do a job because they get paid for it. And people love their job because the human race and society needs it. If all the four are met never ever loose that job and you are on the best job for the society on the earth that we belong to. That gives you a tremendous amount of satisfaction which in turn gives you inner energy.

So boys and girls, thank you for being patient enough to hear my words. And I wish you and your parents and your teachers all the very best. And I am going to conclude with three simple statements, 1. Never ever loose your smile. 2. Whenever you go, whatever you do, your safety is of utmost priority. No.3 Never ever loose your character because after that there is nothing to loose in life, hats off to all the teachers and all the parents and the management of Sahyadri for giving a wonderful opportunity and I wish you all the very best and thank you so much sir.

Mr. Nagaraj Ijari

Vice President, Global
Head-HiTech Industry Solutions Unit
Head- TCS Bangalore Operations

Mr. Nagaraj Ijari in his address to the graduating students stated that it is one of the most memorable days to be cherished as the biggest milestone in life is achieved. Every day is a day to learn and learning is a continuous process that helps one keep updated. He said, find ways to make things possible in life, Dream big, think big and live your dream; passion gives energy which in turn helps to sort out most of the problems in life. Failure helps one learn even better he said, and lastly he advised all the graduates to contribute to the society in whatever way possible for its betterment.

Mr. E S Chakravarthy

Center Head-TCS, Bangalore

Mr. Chakravarthy, Congratulated all the graduates and their proud parents on the occasion. In his address to the graduates he said that energy is the source of success for every individual. He insisted to keep the smile steady on the faces, as smile is an indication of progress, confidence and well being. He defined the types of energies that can be gained by our interaction with the different types of people in the society. He advised the students to develop the problem solving skills and ensure their safety on priority.

Words of Gratitude by the Principal

Respected dignitaries on the dais, off the dais, wonderful students and parents, probably it is the most difficult job to propose the Vote of Thanks on a graduation day because both have a different intersection of meanings. I will give an example of what happened today, all the graduates came and took their certificates and went. If you just observed, it was a fantastic synchronization. You all just entered the stage, in a very short span of time, your smile was mapping, the certificates were given, you turned, the camera was clicked, what synchronization! If you can maintain this synchronization in your life, with the same smile, you would be successful all through your life. I don't think there is anything left for me to say after the thunderous and meaningful speech. I think for you all, it will take years to digest it and I expect that you keep it pondering all through your life.

To succeed in life, align your education with your skills, align your education with goals and dreams, chasing your dream requires effort, passion and hardwork. Nothing in life, can take away the lessons that you have learnt, while walking along the roads of success. And the best example for you was your honorable Chief Guest, Nagarj Ijari Sir. Now I request our honorable Chairman to give a memento. Our Guest of honor, Mr. Chakravarthy, we are honored by your presence and definitely the students would be benefitted by your words of wisdom. May I request our director to give a memento to Chakravarthy. On behalf of the entire Sahyadri family, I thank our Chairman and I also thank our mentor, Dr. D. L. Prabhakara, Secretary, Trustees of the Organization and Founder members, whose unstinted support in every walk of life has led to this. I would like to acknowledge the presence of press and media and other dignitaries.

Ms. Pooja

- Department of Computer Science & Engineering

Good afternoon to one and all gathered here. Respected dignitaries on the dais and off the dais, it's glorifying to look around and see so many familiar faces. You know what so good about an event like this, they are filled with emotions and memories, so here we are to sum up all the memories that I've made in the past four years. I am sure each of you have bundles of it.

I would like to tell you about my journey in Sahyadri and how Sahyadri has molded me as a better person than I was before. There is a lot of difference between the Pooja who is standing in front of you than the one who she used to be. Let me share a few instances where Sahyadri has provided me wonderful opportunities. The first best thing that happened with me here was joining Oratocrats club. This club is a package of overall development of an individual. This was my first step and through I've participated in debate competitions and this has helped me overcome stage fear.

In my third year of engineering I was chosen as the Google Student Facilitator for the year 2016-7 and as the facilitator my task was to conduct workshops. This has thought me to be responsible and coordinate among the fellow mates.

Then comes the most precious and cherished instance in Sahyadri which was being appointed as the placement president for the year 2016-17. Placement's has thought me reality and has prepared me to face the corporate world.

I would now like to take this opportunity to thank our beloved chairman Dr. Manjunath Bhandary, principle Dr. U.M Bhushi, Vice-principle Dr. Balakrishna and Dean Academic Dr. Gorebal for their constant guidance, impartial judgement and evergreen support.

I would like to convey my heartfelt gratitude to my beloved C.S department. The gems of department have provided me with an indefinite amount of memories and learning. I would personally like to thank our HOD Prof. Sudhir Shetty for his constant support and guidance throughout my engineering life.

I would now like to thank that lady who is always been my strength and never let me compromise my love ends. She is none other than Rashmi Madam. Sometimes worlds cannot express our immense gratitude towards a person, today I am facing short of words to express my immense love and respect that I have towards you maam. You are a mentor to me and it's my pleasure to be working under you. I really thank you from the depth of my heart for being so nice and supportive. You were and will always be my inspiration. Thank you so much Maam.

Nothing would be possible without my Mom behind me. She is been like my backbone and my energy booster thank you mom and I love you.

How can I forget my lovely class and my besties. Thank you guys, I will miss you all, you all rock.

My apology is extended to all those lovely people out there whom I have missed out, please remember that you will always stay in my heart. And thank you for being a part of this journey.

I would like to conclude by telling you all a short story, there were two fishes swimming and they happened to meet an older fish swimming in the other way who nodes at them and says "Morning boys, how's the water?" and the two fishes swim along for a while and eventually one of them looks at the other and says "what the hell is water?" this is what the college education is all about. It's about learning how to think, exercise some degree of control over your thoughts so you can choose what to pay attention to.

We all need to know that our thoughts affect our realities and the ability to choose how you collect meaning from your experience. It will determine the lenses from which you see the world and how you react in return.

Wishing you all the luck and a bright future ahead,
THANK YOU.

- Department of Civil Engineering

Good afternoon everyone,

It is my honor and privilege to share my feelings and memories on this beautiful occasion. As you all know, it is not so easy to share all the memories but I would like to take the privilege to thank few important people. Firstly, I would like to thank Rashmi Bhandary Ma'am for giving me this opportunity.

Graduation is an exciting time in a student life. It is a crown that we receive for the effort that we put in completing 16 years of continuous education, which is just like a roller coaster ride. I can see a broad smile on my mothers face today, which indeed explains everything. I would like to thank her for believing me and allowing me to take up Engineering.

I was just a mass of flesh, when I came to this earth. The proper shape was given by my teachers when they blessed me with their knowledge. So, today I would like to take the privilege to thank all my Primary, High school and PU teachers for shaping me as a complete Human being.

Next, I would like to render my sincere thanks to entire Sahyadri family, right from all the Non-teaching staff to Management level. Without the support of these

Experience Sharing by Students

people, I wouldn't have achieved anything. My Principal, Vice Principal, Dean and Chairman observed the leadership qualities and managing skills in me and carved it in to proper shape, which brought me recognition.

I should specially thank my Civil department. The love and care bestowed on me by teaching and non-teaching faculties can never be less than the most expensive thing in this world.

Sorry for being partial, I have to mention the names of two lecturers who mean a lot to me. That is Supreeth Sir and Sudeep Sir. Thank you so much for being my guide, well-wishers and philosophers.

I would like to thank Naveen Pilar sir for guiding me all the time as a Cultural Co-ordinator.

I would like to thank the Branch Presidents Nirmith, Pragathi, Varshitha, Jyotsna, Vaishak and my fellow members of Student Council for supporting me always.

My sincere thanks to my Cultural dept co-ordinators and all the young talents of sahyadri, whose talents helped me to grow as a leader.

And as our chairman always says, "Leaders are not the one who create followers. Leaders are the one who create another leader". I have tried my best to create leaders for the future of Sahyadri. Thank-you sir for believing my ability.

There are so many happy and proud moment that I would cherish throughout my life. Thank-you for all the people who are responsible for it.

I would like to end by one last statement. Successful person is the one, whose presence is acknowledged and absence is felt. My presence was always acknowledged in this college and I hope my absence will be felt too.

Thank you

A token of gratitude to Guests

'Learning is continuous process'

MANGALURU: The seventh graduation day for the engineering students of 2016-17 was held at the Sahyadri College of Engineering and Management. A total of 630 students took oath and received their graduation certificates from the guests.

Addressing the graduates, Nagaraj Ijari, vice president, TCS, Bengaluru, said graduation day is one of the most memorable days to be cher-

ished as the biggest milestone in life has been achieved. Learning is a continuous process that helps one keep updated, he said. He advised people to find ways to make things possible in life, dream big and live the dream. Passion gives energy to sort out problems in life. Failure helps one learn even better, he said. He called upon the graduates to contribute to the society in whichever way possible.

TCS Bengaluru centre head E S Chakravarthy said energy is the source of success for every individual. He advised the students to develop problem-solving skills.

Bhandary Foundation chairman Manjunath Bhandary advised the students to work with commitment and dedication in their companies and be the brand ambassadors of the college.
