EERING & MANAGEMENT

An Autonomous Institution MANGALURU

- Assessment will be both CIA and SEE.
- The practical sessions of the IPCC shall be for CIE only.
- The Theory component of the IPCC shall be for both CIA and SEE respectively.
- The questions from the practical sessions shall be included in Theory SEE.

Note: For Examinations (both CIE and SEE), the question papers shall contain the questions mapped to the appropriate Bloom's Level. Any COs mapped with higher cognitive Bloom's Level may also be assessed through the assignments.

SEE QUESTION PAPER PATTERN:

- 1. The question paper will have **TEN** full questions from **FIVE** Modules
- 2. There will be 2 full questions from each module. Every question will carry a maximum of 20 marks.
- 3. Each full question may have a maximum of four sub-questions covering all the topics under a module.
- 4. The students will have to answer FIVE full questions, selecting one full question from each module.

СО	URSE CONTE	NTS	
	MODULE - I		
Operating Systems and Structures: Introc ystems, multiprocessors systems, clustered			Hours

mode and multimode operations, Distributed systems, Computing environments, Operating

System services, System Calls, Linkers and Loader, Operating system design and

implementation, Operating System Structures

Process Management: Process concept, process state, process control block, context switch;

operations on processes, inter process communication.

MODULE - II

Multi-T	hreaded Programming: Overview of threads, multithreading models, thread libraries, threadi	ng
issues.		
CPU Sc	heduling: Schedulers, Pre-emptive and non-pre-emptive scheduling, dispatcher; Scheduling Criteria	. 8 Hours
Schedul	ing Algorithms: FCFS, SJF, SRTF, RR, Priority, HRRN, multi-level feedback Queue schedulir	ıg,
Multipro	bcessor scheduling.	
	MODULE - III	- 1
Process		n
hardwar	e- mutex, semaphores, monitors.	
Deadloc	eks: System model, necessary conditions for deadlocks, methods for handling deadlock	^{8,} 8 Hours
deadloc	k prevention, deadlock avoidance -resource allocation graph algorithm, banker's algorithm	n,
deadloc	k detection, recovery from deadlock	
	MODULE - IV	
Memory	Wanagement: Background, contiguous memory allocation, paging, swapping.	
Virtual	Memory Management: Background; demand paging: copy-on-write; page replacement algorithms	-
FIFO, O	ptimal, LRU; thrashing	8 Hours
File Sys	stem Interface and Operations: Access methods, Directory structures, Protection, File system	n
structure	e, Directory implementation, Allocation methods, Free space management.	
	MODULE - V	
Storage	Management and Security: Mass storage structures; Disk scheduling algorithms, Swap space	e
manager	nent.	
Protecti	on: Goals, Principles and Domains of protection, Access matrix, Implementation of access matrix	, 8 Hours
Revocati	ion of access rights, Access control.	
	COURSE OUTCOMES	
Upon co	mpletion of this course, the students will be able to:	
		Bloom's
CO No.	Course Outcome Description	Taxonomy
	Identify the structure of an operating system and concept of Process along with inter- process	Level
CO1	communication.	CL3
CO2	Apply the concepts of multi-threading and CPU scheduling algorithms by considering different	CL3
	scheduling criteria.	020
COL	Demonstrate the concepts of Process synchronization and Identify root causes of deadlock to	
CO3	provide the solution for deadlock elimination.	CL3
	Explore the concept of memory management, working of various page replacement algorithms	
CO4	and file system operations.	CL3
CO5	Analyze Disk Storage Structures and the concepts of OS protection.	CL4
Mond	atory Experiment (for practice only not to be included for every):	
wianda	atory Experiment (for practice only, not to be included for exam):	

- 1. Demonstrate the system assembly and disassembly of computer hardware components
- 2. Demonstrate the OS installation with Multi Booting and Virtual Machine platform.

Exp. No.	Experiment Description										CO No.	Bloom's Taxonomy Level		
1		Write C programs to implement basic UNIX system calls - read(), write(), open(), close(), lseek(), create().									CO5	CL3

CREDITS – 3					

COURSE PREREQUISITES:

1. Fundamental knowledge of basic logic design principles and various function of digital computer..

COURSE OBJECTIVES:

- 2. Understand the organization and architecture of computer systems, their structure and operation
- 3. Illustrate the concept of machine instructions and programs
- 4. Demonstrate different ways of communicating with I/O devices
- 5. Describe different types memory devices and their functions
- 6. Explain arithmetic and logical operations with different data types
- 7. Demonstrate processing unit with parallel processing and pipeline architecture

TEACHING - LEARNING STRATEGY:

Following are some sample strategies that can be incorporate for the Course Delivery

- 1. Chalk and Talk Method/Blended Mode Method
- 2. Power Point Presentation
- 3. Expert Talk/Webinar/Seminar
- 4. Video Streaming/Self-Study/Simulations
- 5. Peer-to-Peer Activities
- 6. Activity/Problem Based Learning
- 7. Case Studies
- **8.** MOOC/NPTEL Courses
- 9. Any other innovative initiatives with respect to the Course contents

COURSE CONTENTS

MODULE - I

Basic Structure of Computers: Basic Operational Concepts, Bus Structures, Performance –				
Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement.	l I			
Machine Instructions and Programs: Memory Location and Addresses, Memory Operations,				
Instructions and Instruction Sequencing, Addressing Modes				

Textbook 1: Chapter1 – 1.3, 1.4, 1.6 (1.6.1-1.6.4, 1.6.7), Chapter2 – 2.2 to 2.5 MODULE - II

Input/Output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Direct 8 Hours

Memory Access, Buses, Interface Circuits

Textbook 1: Chapter4 – 4.1, 4.2, 4.4, 4.5, 4.6

DESIGN AND ANALYSIS OF ALGORITHMS (Effective from the Academic Year 2023 - 2024)

SEMESTER - IV

Course Code	CS422T4C	CIA Marks	50
Number of Contact Hours/Week(L:T:P:S)	3:0:0:2	SEE Marks	50
Total Hours of Pedagogy	40 L + 20 S	Exam Hours	03
	CDEDITC	3	

$\mathbf{CREDITS} - \mathbf{3}$

Prerequisites:

1. Fundamental knowledge of Mathematics, Data Structures.

Course Objectives:

This course will enable students to:

- Describe the techniques for analyzing algorithms and how to evaluate their performance. Indicate the effectiveness of the method using asymptotic notations.
- Utilize algorithm design techniques including the brute force approach, greedy approach, divideand-conquer strategy, decrease-and-conquer strategy, transform-and-conquer strategy, dynamic programming, backtracking, and branch-and-bound to solve issues.
- Decide on the best data structure and algorithm design technique for the given application.
- Recognize the fundamental ideas behind NP-complete and NP-hard class issues.

Teaching - Learning Strategy:

These are some sample strategies, which course faculty members can incorporate in the Teaching Learning Process:

- Chalk and Talk Method/Blended Mode Method
- Power Point Presentation
- Expert Talk/Webinar/Seminar
- Video Streaming/Self-Study/Simulations
- Peer-to-Peer Activities
- Activity/Problem Based Learning
- Case Studies
- MOOC/NPTEL Courses

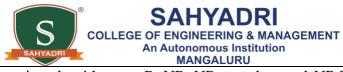

COURSE CONTENTS

MODULE - 1

Module Contents	Lecture Hours
Introduction to Algorithms- Properties, Specification, Fundamentals of	8 Hours
Algorithmic Problem solving, Analysis Framework.	
Performance Analysis: Estimating Space complexity and Time complexity of	
algorithms. Asymptotic Notations with examples, Basic efficiency classes,	
Mathematical analysis of Non-Recursive and Recursive Algorithms with Examples.	
Brute force design techniques: Selection sort, sequential search and String-	
matching algorithm with complexity Analysis.	

	MODULE - 2	
Divide conque comple sort, Qu Decrea Sorting	8 Hours	
~	MODULE - 3	
sequen Algorit Algorit	y Method: General method, Coin Change Problem, Knapsack Problem, Job cing with deadlines, Minimum cost spanning tree algorithms: Prim's hm, Kruskal's Algorithm. Single source shortest paths: Dijkstra's hm. Optimal Tree problems: Huffman Trees and Codes. Transform and er Approach: Heaps and Heap Sort.	8 Hours
	MODULE - 4	
Transi Algorit Person Space-	tive Closure: Warshall's Algorithm. All Pairs Shortest Paths: Floyd's hm, Knapsack problem, Optimal Binary Search Trees, Travelling Sales problem. Time Tradeoffs: Sorting by Counting, Input Enhancement in String ng Harspool's algorithm.	8 Hours
	MODULE - 5	
Hamilte Branch probler NP-Co	 cacking: General method, N-Queens problem, Sum of subsets problem, onian cycles Problems. and Bound: Basic concepts, Assignment Problem, Travelling Sales Person n, 0/1 Knapsack problem. mplete and NP-Hard problems: Basic concepts, non-deterministic nms, P, NP, NP-Complete, and NP-Hard classes. 	8 Hours
	COURSE OUTCOMES	
Upon c	ompletion of this course, the students will be able to:	
CO No.	Course Outcome Description	Bloom's Taxonomy Level
CO1	Solve the time complexity of recursive, non-recursive and brute force algorithms using asymptotic notations.	CL3
CO2	Solve the recurrence relation to obtain the performance of divide-and- conquer, decrease-and conquer approach.	CL3
CO3	Apply greedy technique, transform and conquer strategy to solve the problem for optimal solution.	CL3
CO4	Determine the time complexity for Dynamic-Programming paradigm and String-matching techniques.	CL3
CO5	Apply backtracking and branch-and-bound approach on combinatorial	CL3

CREDITS –1

Prerequisites:

- 1. Knowledge of Mathematics, Data Structures and java Programming
- 2. Usage of IDEs Eclipse, Netbeans and VS studio

Course Objectives:

This course will enable students to:

- 1. Design, analyze, and implement various algorithms in Java
- 2. Make use of different algorithmic design techniques to solve problems.
- 3. Analyze and contrast the effectiveness of various algorithms.

Descriptions:

Installation procedure of the required software must be demonstrated, carried out in groups and documented in the journal.

Algorithm Implementation using Python Programming (Max. Marks: 50)

1. Design, develop, and implement the specified algorithms using java Programming under LINUX/Windows environment.

Exp. No.	Experiment Description
1	Design an application to create a list of TV channels (minimum 10) that includes the numbers of viewers and viewing time. Rate the channels based on the number of viewers (1 High - 6 low). Plot graphs to analyze the running times of different sorting algorithms.
2	Design and implement an application that considers the problem of scheduling n jobs of known durations t1, t2,, tn for execution by a single processor. The jobs can be executed in any order, one job at a time. Find and display the schedule that minimizes the total time spent by all the jobs in the system by maximizing the profit.
3	Develop an optimal route for a scenario where a person wants to buy a ticket to a baseball game. Along the way from the house to reaching the destination, some known person who lives on that street might give money. Visit towns for the collection of more money to buy a ticket.
4	Design an application for a thermal power station and electrical lines that are connected among various power stations. The costs of electrification involved appear as weights on the edges.

MANGALURU Obtain the minimum possible connection among the thermal stations so that any two thermal stations can be linked with the minimum cost involved. Develop a program for the following: 5 To construct a Huffman code for a given English text and encode it. 1. To decode an English text which has been encoded with a Huffman code? 2. The owner of a gourmet coffee shop wishes to mix a 10-pound bag of coffee using various types of coffee beans in such a way to produce the coffee blend at the maximum cost. The 6 weights of the objects in the problem correspond to the quantity in pounds available of each type of coffee bean. The value of each quantity of coffee beans is the total cost of that quantity in rupees. Apply the Knapsack algorithm to maximize the profit. Design an application for drilling an optimal printed circuit board. To drill two holes of different diameters consecutively, the head of the machine has to move to a toolbox and change the drilling equipment. This is quite time consuming. Thus, it is clear that one has to choose 7 some diameter, drill all holes of the same diameter, change the drill, drill the holes of the next diameter, etc. Thus, this drilling problem has to minimize the travel time for the machine head. Find the optimal time to drill the circuit board. Design and implement Java Program to find all Hamiltonian Cycles in a connected undirected 8 Graph G of n vertices using backtracking principle. Design and implement for a given chess board having N×N cells, place N queens on the board in such a way that no queen attacks any other queen. If it is possible to place all the N queens in 9 such a way that no queen attacks another queen, then print N lines having N Queens. If there is more than one solution of placing the queens, print all of them. If it is not possible to place all N queens in the desired way, then print "Not possible". **COURSE OUTCOMES** Upon completion of this course, the students will be able to: Bloom's CO **Course Outcome Description** Taxonomy No. Level Implement Python data structures – lists, tuples & amp; dictionaries to represent CO1 CL3 compound data. Design, analyze and implement the brute force, divide and conquer algorithms CO₂ CL4 and compare their time complexity. Design and implement the greedy technique algorithms to solve the problem for CO3 CL3 optimal solution. Apply dynamic programming techniques to solve Traveling Salesperson CO4 CL3 Problem and Knapsack problem. **CO-PO-PSO MAPPING** CO Programme **Programme Outcomes (PO)** No. Specific

ADVANCED GRAPH THEORY

(Effective from the Academic Year 2023 -2024)

SEMESTER - IV

Course Code	MA422T6CA	CIA Marks	50
Number of Contact Hours/Week (L:T:P:S)	3:0:0:1	SEE Marks	50
Total Hours of Pedagogy	40 hrs	Exam Hours	03
	CREDITS – 3	3	·

COURSE PREREQUISITES:

• Basic knowledge of Graph Theory.

COURSE OBJECTIVES:

To learn fundamental concepts and to explore modern applications of Graph Theory for problemsolving and network analysis

TEACHING - LEARNING STRATEGY:

These are some sample strategies, which course faculty members can incorporate in the Teaching Learning Process:

- Chalk and Talk Method/Blended Mode Method
- Power Point Presentation
- Expert Talk/Webinar/Seminar
- Video Streaming/Self-Study/Simulations
- Peer-to-Peer Activities
- Activity/Problem Based Learning
- Case Studies
- MOOC/NPTEL Courses

COURSE CONTENTS

Module Contents	Lecture Hours
MODULE - 1	
Graphs and Subgraphs:	8 Hours
Definitions and Examples, Subgraphs, Operations on graphs, Connected and Disconnected	

	MANGALURU	
-	s, Complements, Graph Isomorphism, Vertex Degree, Euler Trails and Circuits,	
Hamil	tonian paths and circuits.	
	MODULE - II	
Matri	ces, Coloring and Directed Graph	8 Hours
Proper	Representation, Adjacency matrix, Incidence matrix, Circuit matrix, Path Matrix, ties - Related Theorems. Graph Coloring, Chromatic Polynomial, Chromatic oning, Matching, Covering - Related Theorems.	
	MODULE - III	
Trees:	Trees, Properties of trees, Distance and centres in tree, Rooted and binary trees.	8 Hours
Tree, I	ning trees of a graph and Spanning trees in a weighted graph. Traversal of Binary Pre-order and Post-order Traversal. Prefix codes, optimal tree. Fundamental Circuits at sets, Network Flows. Max- flow Min- cut Theorem (Statement only and problems).	
	MODULE - IV	
plana	ar, Dual Graphs: Planar Graphs. Kuratowski's graphs. Different representation of r graph. Detection of planar graphs. Euler's polyhedral formula (No proof). netrical Dual (no theorems) problems.	8 Hours
Indepe	nating sets: Dominating set. Minimal Dominating set. Domination number. Endent dominating set. Finding minimal dominating sets. Some applications of ation theory.	
	MODULE - V	
Graph	n Theoretic Algorithms and Graph theory in Electrical networks:	8 Hours
Algori switch switch	uter representation of a graph. Algorithm on spanning trees: Kruskal's and Prim's thm. Shortest path algorithms: Dijkstra's algorithm, Warshall's algorithm. Graphs in ing and coding Theory. Contact networks, analysis of contact networks, Sequential ing networks. Electrical network analysis, Kirchhoff's current and voltage networks, currents and node voltages, LRC networks.	
	COURSE OUTCOMES

Assessment Strategy:

Assessment will be both CIA and SEE. Students learning will be assessed using Direct and Indirect methods:

SI. No.	Assessment Description	Weightage (%)	Max. Marks
	Continuous Internal Assessment (CIA)	100 %	50
1	Continuous Internal Evaluation (CIE)	60 %	30
	Assignments*	40 %	20
2	Semester End Examination (SEE)	100 %	50
Assign	ment Types:	I I_	

Sl. No.	Assignment Description	Max. Weightage (%)	Max. Marks
1	Written Assignments	25 %	5
2	Quiz	25 %	5
3	Case Studies	25 %	5
4	Seminar/Presentation	15 %	3
5	Peer - to -Peer Learning	10 %	2

SEE Question Paper Pattern:

- 7. The question paper will have **TEN** full questions.
- 8. Each full question consisting of 20 marks.
- 9. There will be 2 full questions from all the FIVE modules.
- 10.Each full question will have a maximum of three sub-questions covering all the topics under a module.
- 11. The students will have to answer 5 full questions, selecting one full question from each module.

REGRESSION STATISTICAL COMPUTING

(Effective from the Academic Year 2023 -2024)

SEMESTER - IV

Course Code	MA422T6C B	CIA Marks	50
Number of Contact Hours/Week (L:T:P:S)	3:0:0:1	SEE Marks	50
Total Hours of Pedagogy	40 L	Exam Hours	03

CREDITS – 3

COURSE PREREQUISITES: Basic knowledge of statistics and programming.

COURSE OBJECTIVES:

- 1. Understand the fundamentals of regression analysis and its application in statistical computing.
- 2. Develop proficiency in implementing regression models, assessing model fit, and interpreting results.
- 3. Apply regression techniques to real-world datasets, solving complex problems in data analysis and prediction.

TEACHING - LEARNING STRATEGY:

These are some sample strategies, which course faculty members can incorporate in the Teaching Learning Process:

- 4. Chalk and Talk Method/Blended Mode Method
- 5. Power Point Presentation
- 6. Expert Talk/Webinar/Seminar
- 7. Video Streaming/Self-Study/Simulations
- 8. Peer-to-Peer Activities
- 9. Activity/Problem Based Learning
- 10. Case Studies
- **11.** MOOC/NPTEL Courses

COURSE CONTENTS

MODULE - I

model.	uction to Regression Analysis: Basics of regression analysis. Simple linear regression Assumptions, Estimation of model parameters, least squares method, Difference n descriptive and inferential statistics. Regression, Dependent and independent es.	8 Hours
	MODULE - II	
propert regress	e Linear Regression: least squares method, Interpretation of Regression coefficient ies Correlation-Karl Pearson's coefficient of correlation regression analysis-lines of ion. Fitting of first and second-degree curve, exponential curve by the method of least a fter logarithmic transformation.	8 Hours
	MODULE - III	·
Estima	variate data analysis 1: Multiple linear regression (3 variables only), Assumption tion of Regression by least squares method. Estimation of regression coefficients multiple correlation coefficients. Coefficient of Determination (R^2)	0
	MODULE - IV	
Logisti	ariate Data Analysis 2 - (Description of various multivariate methods to be given c regression, Factor Analysis, Structural Equation Modelling, Cluster Analysis ninant Analysis, conjoint analysis, Correspondence Analysis	0 1100110
	MODULE – V	
	tical Computing: Packages, GGplot2 package, Likert package, correlation and ion analysis (bivariate and multivariate data), polynomial regression	8 Hours
	COURSE OUTCOMES	
Upon c	completion of this course, the students will be able to:	
CO No.	Course Outcome Description	Bloom's Taxonomy Level
CO1	Apply regression analysis to solve complex computer science problems.	CL3
CO2	Use statistical software tools proficiently for data analysis and modeling.	CL2
CO3	Interpret and communicate results effectively.	CL3
CO4	Apply regression techniques to enhance decision-making and prediction in computer science.	CL3
CO5	Demonstrate critical thinking and problem-solving skills in practical applications	CL3

OPTIMIZATION TECHNIQUES

(Effective from the Academic Year 2023 - 2024)

SEMESTER - IV

Subject code	MA422T6CC	CIA Marks	50
Number of Contact Hours/Week (L:T:P:S)	3:0:0:1	SEE Marks	50
Total Hours of Pedagogy	40 L	Exam Hours	03
	CREDITS – 3	·	

COURSE PREREQUISITES:

Basics of Statistics, Probability distributions. Multiple integration

COURSE OBJECTIVES:

- 23. Study the techniques of complex variables and functions together with their derivatives, Contour integration and transformations
- 24. Enable the students to apply basic concepts of graph theory on developing algorithms
- Understand the concept of probability and enable the students to predict the outcome of simple experiments 25.
- Enable the students to use various tests of significance in engineering problems 26.
- 27. Understand the concept of optimization techniques

TEACHING - LEARNING STRATEGY:

These are some sample strategies, which course faculty members can incorporate in the Teaching Learning Process:

- 28. Chalk and Talk Method/Blended Mode Method
- 29. Power Point Presentation
- 30. Expert Talk/Webinar/Seminar
- 31. Video Streaming/Self-Study/Simulations
- 32. Peer-to-Peer Activities
- 33. Activity/Problem Based Learning
- 34. Case Studies
- **35.** MOOC/NPTEL Courses

Note: The assignments mentioned above may be provided appropriately to the students belonging to different bands

SEE QUESTION PAPER PATTERN:

50. The question paper will have **TEN** full questions from **FIVE** Modules

51. There will be 2 full questions from each module. Every question will carry a maximum of 20 marks.

52. Each full question may have a maximum of four sub-questions covering all the topics under a module.

53. The students will have to answer FIVE full questions, selecting one full question from each module.

TEXT BOOKS:

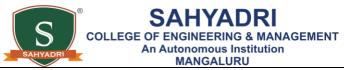

54. Elements of Real Analysis, Shanti Narayan, Dr.M.D. Raisinghania, (2016)

55. Topology of Metric Spaces by S. Kumareshan, Alpha Science International Limited(2005)

REFERENCE BOOKS:

- 56. Metric Spaces by Satish Shirali and Harikrishan L Vasudeva Springer, (2006)
- 57. Metric Spaces by P.K. Jain and Khalil Ahmad ,Alpha Science International, (2004)

Assessment Mode: Weekly Assessment of Laboratory Work (50 Marks) - the marks will be awarded based on the Continuous Internal Assessment (Weekly Assessment, each of 25 marks) of the students in each laboratory session. The average of all the marks obtained across the sessions will be the Final CIA marks.

An Autonomous Institution MANGALURU

& MANAGEMENT

69. In Laboratory Courses where (C) is not a component of the assessment pattern, then (A) will have 50% weightage (25 Marks), and (B) will have 50% weightage (25 Marks).

Assessment Mode: The marks will be awarded based on the Continuous Internal Assessment (Weekly Assessment) (A) and One Laboratory Test (B).

- 70. In Weekly Assessment, the student will be evaluated in each laboratory session for 25 marks. The average marks obtained across all the experiments will be the marks obtained for (A).
- 71.A Laboratory Test, similar to the SEE exam is conducted towards the end of the Semester/Course, whichever is earlier. The obtained marks are scaled down to 25 Marks (B)

The Sum of marks obtained across (A) and (B) will be the Final CIA marks.

- 72. In Laboratory Courses where (C) is a component of the assessment pattern, then assessment will be done by considering the weightages given above, i.e. (A) 25 Marks (Weekly Assessment), (B) 15 Marks (Laboratory Examination), (C) 10 marks (Open Ended Experiments/Mini Projects)
 - 73. The respective course instructor will design the assessment criteria for the said assessment components.
 - 74. The assessment components will be made known to the students by the respective Course Coordinators prior to the commencement of the Laboratory Work.

In all the cases, the assessments will be done based on the criteria designed by the Course Coordinator.

SEE QUESTION PAPER PATTERN:

- 5. All laboratory experiments should be included for practical examination, from which students are allowed to pick one experiment from the lot.
- 6. SEE shall be conducted for 100 Marks and the marks will be scaled down to 50.
- 7. General Marks Distribution: Procedure + Conduction + Viva = 20% + 50% + 30%.
- 8. Change of experiment is allowed only once and 20% of the marks allotted to the Procedure will be made ZERO (if a question carries two experiments, both should be changed). The evaluation will be done for 80% of the total maximum marks.

Assessm	nent wi	ll be bot	h CIA a	nd SEE		SSESSI ts learnin				g Direct	and Inc	lirect me	thods:	
Sl. No.	Assessment Description							Weightage (%) Max.			Marks			
1	Cont	Continuous Internal Assessment (CIA)						100 %			50			
	Laboratory Work (A)							50 %			25			
	Laboratory Test (B)							30 %			15			
	Open Ended Experiments /Mini Projects (C)							20 %			10			
2	Semester End Examination (SEE)							100 % 50				50		

ASSESSMENT STRATEGY:

60. In Laboratory Courses where (B) and (C) are not the components of the assessment pattern, then (A) will have 100% weightage (50 Marks).

Assessment Mode: Weekly Assessment of Laboratory Work (50 Marks) - the marks will be awarded based on the Continuous Internal Assessment (Weekly Assessment, each of 25 marks) of the students in each laboratory session. The average of all the marks obtained across the sessions will be the Final CIA marks.

61. In Laboratory Courses where (C) is not a component of the assessment pattern, then (A) will have 50% weightage (25 Marks), and (B) will have 50% weightage (25 Marks).

Assessment Mode: The marks will be awarded based on the Continuous Internal Assessment (Weekly Assessment) (A) and One Laboratory Test (B).

MANAGEMENT

- 62. In Weekly Assessment, the student will be evaluated in each laboratory session for 25 marks. The average marks obtained across all the experiments will be the marks obtained for (A).
- 63.A Laboratory Test, similar to the SEE exam is conducted towards the end of the Semester/Course, whichever is earlier. The obtained marks are scaled down to 25 Marks (B)

The Sum of marks obtained across (A) and (B) will be the Final CIA marks.

- 64. In Laboratory Courses where (C) is a component of the assessment pattern, then assessment will be done by considering the weightages given above, i.e. (A) 25 Marks (Weekly Assessment), (B) 15 Marks (Laboratory Examination), (C) 10 marks (Open Ended Experiments/Mini Projects)
 - 65. The respective course instructor will design the assessment criteria for the said assessment components.
 - 66. The assessment components will be made known to the students by the respective Course Coordinators prior to the commencement of the Laboratory Work.

In all the cases, the assessments will be done based on the criteria designed by the Course Coordinator.

SEE QUESTION PAPER PATTERN:

- 7. All laboratory experiments should be included for practical examination, from which students are allowed to pick one experiment from the lot.
- 8. SEE shall be conducted for 100 Marks and the marks will be scaled down to 50.
- 9. General Marks Distribution: Procedure + Conduction + Viva = 20% + 50% + 30%.
- **0.** Change of experiment is allowed only once and 20% of the marks allotted to the Procedure will be made ZERO (if a question carries two experiments, both should be changed). The evaluation will be done for 80% of the total maximum marks.
