

## Fifth Semester B.E. Degree Examination, June/July 2018

### Formal Languages and Automata Theory

Time: 3 hrs.

Max. Marks: 100

**Note:** Answer any FIVE full questions, selecting atleast TWO questions from each part.

#### PART - A

1. a. Find a deterministic finite automata that recognizes each of the following sets ( $\Sigma = \{0, 1\}^*$ )
    - (i)  $\{0\}$
    - (ii)  $\{1, 00\}$
    - (iii)  $\{1^n \mid n = 2, 3, 4, \dots\}$(10 Marks)
  - b. State the alphabets  $\Sigma$  for the following languages :
    - (i)  $L = \Sigma^* = \{ \in 0, 1, 00, 01, 11, 000, 001, 010, \dots \}$
    - (ii)  $L = \Sigma^+ = \{ a, aa, aaa, \dots \}$
    - (iii)  $L = \Sigma^+ = \{ \in \}$(05 Marks)
  - c. Design a DFA that recognizes the following language :
 
$$L = \{ W/W \text{ is non-empty & has 1 on every odd position} \}$$
(05 Marks)
2. a. Give NFAs with specified Number of states recognizing each of the following languages in all cases, the alphabet is  $\Sigma = \{0, 1\}$ 
    - (i) The language  $\{ W \in \Sigma^* \mid W \text{ contains the substring } 0101 \text{ ie, } W = X0101Y \text{ for some } X, Y \in \Sigma^* \}$  with five states.
    - (ii) The language  $\{ W \in \Sigma^* \mid W \text{ contains at least two 0's or exactly two 1's} \}$  with six states.(10 Marks)
  - b. Convert the following NFAs to DFAs [Refer Fig.Q2(b)].

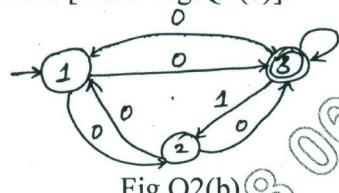

Fig.Q2(b)

- c. Write a Regular expression for the following language:
  - (i) The language  $\{ W \in \Sigma^* \mid |W| \text{ is odd, } \Sigma = \{a, b\} \}$(03 Marks)

3. a. Convert the following  $\in$ NFA into an equivalent DFA [Refer Fig.Q3(a)].

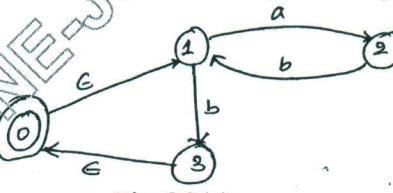

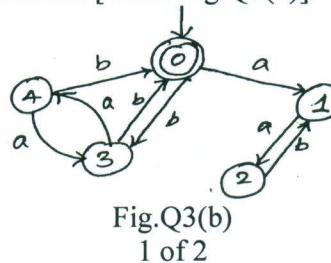

Fig.Q3(a)

- b. Minimize the following finite automata [Refer Fig.Q3(b)]:

Fig.Q3(b)  
1 of 2

- c. Construct a regular expression corresponding to the Automata given below [Refer Fig.Q3(c)] : (04 Marks)

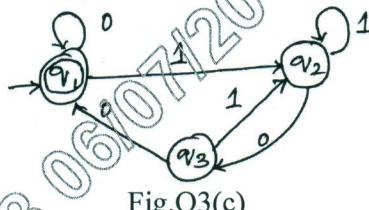

Fig.Q3(c)

- 4 a. Give a Context Free Grammar (CFG) for each of the following language over the alphabet  $\Sigma = \{a, b\}$ .
- (i) All strings in the language  $L = \{ a^n b^m a^{2n} / n, m \geq 0 \}$
  - (ii) All non empty strings that start and end with the same symbol
  - (iii) All strings with more a's than b's.
- b. Is the following language L is regular? Justify your answer.  
 $L = \{ a^n / n \text{ is prime} \}$
- c. State and prove the pumping Lemma for Regular language.

### PART - B

- 5 a. Design CFG and PDA for the following language:  
 $L = \{ 0^n 1^n / n \geq 0 \}$ , where  $\Sigma = \{0, 1\}$
- b. Design a PDA for the following languages L.  
 $L = \{ a^i b^j c^k d^l / i + k = j + l, i, j, k, l \geq 0 \}$ , where  $\Sigma = \{a, b, c, d\}$
- 6 a. Convert the following CFG to a PDA:  
 $S \rightarrow aAA, A \rightarrow aS / bS / a$
- b. What is the CNF and GNF? Obtain the following grammar in CNF:  
 $S \rightarrow aBa | abba$   
 $A \rightarrow ab | AA$   
 $B \rightarrow aB | a$
- 7 a. For the CFG with productions :  
 $S \rightarrow a/aAB | aCb, A \rightarrow aB | \epsilon, B \rightarrow BaA | \epsilon,$   
 $C \rightarrow B | bCb | S, D \rightarrow dd | cC$
- (i) Eliminate  $\epsilon$  productions
  - (ii) Eliminate the unit productions
  - (iii) Eliminate the useless symbols
- b. Prove that the context free Languages are closed under Union concatenation and Kleen closure.
- 8 Write short notes on the following (any four) :
- a. Post correspondence problem
  - b. Applications of Regular expressions
  - c. Multi-tape Turing machine
  - d. Undecidable languages
  - e. Chomsky Hierarchy
  - f. Recursively enumerable languages.

(20 Marks)
