15ME/MA34

## Third Semester B.E. Degree Examination, Aug./Sept.2020 Mechanics of Materials

Time: 3 hrs.

Max. Marks: 80

*Note: Answer any FIVE full questions, choosing ONE full question from each module.*

### Module-1

- 1 a. Derive an expression for the total extension of the tapered circular bar of diameter  $d_1$  and  $d_2$ , when it is subjected to an axial pull  $P$ . (08 Marks)
- b. A stepped bar is subjected to an axial load is shown in Fig.Q.1(b). Determine the change in length of the bar. Take  $E = 200\text{GPa}$  for steel,  $E = 70\text{GPa}$  for Aluminium and  $E = 100\text{GPa}$  for copper. All dimensions are in mm. (08 Marks)

Fig.Q.1(b)

OR

- 2 a. Define:
- Modulus of Elasticity
  - Modulus of Rigidity
  - Poisson's ratio
  - Thermal stress. (08 Marks)
- b. A steel rod of 20mm diameter and 300mm long is enclosed centrally inside a hollow copper tube of external diameter 30mm and internal diameter 25mm. The composite bar carries an axial load of 50kN. Take  $E_{\text{steel}} = 200\text{GPa}$ ,  $E_{\text{copper}} = 100\text{GPa}$ . Determine:
- Load carried by each material
  - Stresses developed on each material. (08 Marks)

### Module-2

- 3 a. Define or explain:
- Principal plane
  - Principal stresses
  - Plane of maximum shear
  - Maximum shear stress. (08 Marks)

- b. The state of stress at a point in a strained material is shown in Fig.Q.3(b). Determine:
- i) Principal stresses and their planes
  - ii) Maximum shear stress and its planes.

**(08 Marks)**

Fig.Q.3(b)

**OR**

- 4 a. Derive the expressions for circumferential and longitudinal stresses developed in thin cylinder subjected to internal pressure. **(06 Marks)**
- b. A thick cylinder of internal diameter 200mm and external diameter 300mm is subjected to an internal pressure  $14\text{N/mm}^2$ . Find the maximum hoop stress developed. Also plot the variation of hoop stress and radial pressure across the thickness of the cylinder. **(10 Marks)**

**Module-3**

- 5 a. Define:
  - i) Shear force
  - ii) Bending moment
  - iii) Point of contra flexure.**(06 Marks)**
- b. Draw the shear force and bending moment diagrams for the beam shown in Fig.Q.5(b). **(10 Marks)**

Fig.Q.5(b)

**OR**

- 6 a. Derive the relation  $\frac{M}{I} = \frac{\sigma}{y} = \frac{E}{R}$  with usual notations. **(08 Marks)**
- b. A beam of symmetric I-section consists of flanges of  $100\text{mm} \times 10\text{mm}$  and a web of  $180\text{mm} \times 5\text{mm}$ . The beam is used as simply supported subjected to udl of  $10\text{kN/m}$ . The beam is 10m long. Determine the maximum bending stress and sketch the variation along the depth of the section. **(08 Marks)**

15ME/MA34

**Module-4**

- 7 a. Derive the torsion equation with usual notations. (08 Marks)  
b. Find the diameter of the shaft required to transmit 60kW at 150rpm, if the maximum torque is 25% more than the mean torque. The maximum permissible shear stress is 60MPa. Also find the angle of twist for a length of 4m. Take  $G = 80\text{GPa}$ . (08 Marks)

**OR**

- 8 a. Derive an expression for buckling load in a column subjected to an axial compressive load, when both ends are fixed. (08 Marks)  
b. A hollow cast iron column whose outside diameter is 200mm and has a thickness of 20mm is 4.5m long and is fixed at both ends. Find the ratio of Euler's to Rankine's constants is  $1/1600$  and crushing strength as  $550\text{N/mm}^2$ . (08 Marks)

**Module-5**

- 9 a. Define:  
i) Strain energy  
ii) Proof resilience  
iii) Modulus of resistance. (06 Marks)  
b. State Castigliano's first and second theorems. (04 Marks)  
c. Calculate the strain energy stored in a bar 2m long, 50mm wide and 40mm thick when it is subjected to a tensile load of 60kN. Take  $E = 200\text{GPa}$ . (06 Marks)

**OR**

- 10 a. Determine the strain energy stored in a cantilever beam of length  $L$  subjected to a point load  $P$  at its free end and hence find the deflection of its free end. (08 Marks)  
b. Explain maximum principal stress theory and maximum shear stress theory. (08 Marks)
