## USN

# Seventh Semester B.E. Degree Examination, Jan./Feb. 2021 Design of RCC and Steel Structures 

Time: 3 hrs .
Max. Marks: 80

## Note: 1. Answer any FIVE full questions, choosing ONE full question from each module. <br> 2. Use of IS456-2000 and SP16, IS800, -steel tables is permitted.

## Module-1

1 Design RCC rectangular combined footings for two columns which are 3.6 m apart carrying a load of 1000 kN and 1500 kN . Sizes of column are $400 \mathrm{~mm} \times 400 \mathrm{~mm}$ and $600 \times 600 \mathrm{~mm}$. Width of footing is 1.8 m SBC of soil is $280 \mathrm{kN} / \mathrm{m}^{2}$. M20 concrete and Fe415 steel is used. Assume beam and slab type combined footing sketch the details of Reinforcement.
(40 Marks)

## OR

RCC hall 10 m wide 20 m long is provided with portal frame $4 \mathrm{~m} \mathrm{c} / \mathrm{c}$. Frame are fixed at bottom. Heights of columns are 16.5 m . Live load $=1.5 \mathrm{kN} / \mathrm{m}^{2} \mathrm{SBC}=120 \mathrm{kN} / \mathrm{m}^{2}$. Design the slabs, portal Frame, column and footing using M20 concrete and Fe 415 steel. Sketch details of reinforcement.
(40 Marks)

## Module-2

3 Design a plate girder for an effective span 14 m . Load on the girder consist of UDL $45 \mathrm{kN} / \mathrm{m}$ in addition to two point loads each of magnitude 400 kN placed at a distance of 3 m , on either side of mid span point of girder, Design Mid span cross section curtailment of flange, Intermediate stiffness and end bearing stiffness.
Draw sketch showing detail of longitudinal section cross section at mid span and support and plan of girder.
(40 Marks)

## OR

Design a gantry girder for a span 25 m column spacing $=8 \mathrm{~m}$, Wheel base $=3.5 \mathrm{~m}$, Crane capacity $=200 \mathrm{kN}$, Weight of crane bridge $=150 \mathrm{kN}$, Weight of trolley crab $=75 \mathrm{kN}$, Min hook distance $=1 \mathrm{~m}$, Weight of rail $=0.3 \mathrm{kN} / \mathrm{m}$, height of rail $=105 \mathrm{~mm}$.
Draw suitable sketch showing details of cross section, Longitudinal section and plan.
