Important Note : 1. On completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages. 2. Any revealing of identification, appeal to evaluator and /or equations written eg, 42+8 = 50, will be treated as malpractice.

b. Particulars of regarding the income of two villages are given below:

	Village 'X'	Village 'Y'	
Number of people	600	500	
Average income (Rs.)	175	186	G
Variance	100	81	

CENTRA

- (i) In which village the variate in income is greater?
- (ii) What is the combined standard deviation of the village 'X' and village 'Y' put together? (07 Marks)
- c. Calculate Spearman's Rank correlation co-efficient between advertisement cost and sales from the following data:

Advertisement cost (000 Rs.)	39	65	62	90	82	75	25	98	36	78
Sales (lakhs Rs.)	47	53	58	86	62	68	60	91	51	84
						7				

- 6 a. What are the different measures of dispersion? Explain.
  - b. Explain the different components of time series.
  - c. One forth of the first year student admitted to a Bangalore college are out of state students. If the students are assigned at random to the dormitories, 3 to a room, what is the probability that in one room.
    - (i) At least 2 of the 3 roommates are out of state students.
    - (ii) At most 2 of the 3 roommates are out of state students. (10 Marks)

## 7 a. Define normal distribution.

- b. Explain the characteristics of Good Hypothesis.
- c. Define Hypothesis. Describe the formulation of Hypothesis with flow process chart.

(10 Marks)

(06 Marks)

(07 Marks)

- 8 a. Write briefly on the following terms:
  - (i) Type I error.
  - (ii) Type II error.
  - b. The daily wages of 1000 workmen are normally distributed around a mean of Rs.70 and with a standard deviation of Rs.5. Estimate the number of workers whose daily wages will be:
    - (i) Between Rs.70 and 72
    - (ii) Between Rs.69 and 72
    - (iii) More than Rs.75
    - (iv) Less than Rs.63
    - (v) More than Rs.80
    - (vi) Also estimate the lowest daily wages of the 100 highest paid workers. (14 Marks)
