

17ME33

# Third Semester B.E. Degree Examination, Jan./Feb. 2021 Basic Thermodynamics 

Time: 3 hrs.
Max. Marks: 100

## Note: 1. Answer any FIVE full questions, choosing ONE full question from each module. <br> 2. Use of thermodynamic data book, steam tables are permitted.

## Module-1

1 a. What is thermodynamics? Differentiate between the classical and statistical approaches to thermodynamics.
(06 Marks)
b. Classify the following into intensive and extensive properties.
i) Enthalpy specific entropy
ii) Viscosity
iii) Quality of steam
iv) Refractive index
v) Roll strength of class.
(06 Marks)
c. A new scale N of temperature is devised in such a way that the freezing point of ice is $100^{\circ} \mathrm{N}$ and the boiling point of water is $400^{\circ} \mathrm{N}$. What is the temperature reading on this new scale when the temperature is $150^{\circ} \mathrm{C}$ ? At what temperature both the Celsius and the new scale reading would be the same?
(08 Marks)

## OR

2 a. Distinguish between:
i) Point function and path function
ii) Intensive and extensive property.
(08 Marks)
b. What is flow work? Is it different from displacement work?
(04 Marks)
c. To a closed system 150 kJ of work is supplied. If the initial volume is $0.6 \mathrm{~m}^{3}$ and pressure of the system changes as $\mathrm{P}=8-4 \mathrm{~V}$, where P is in bar and V is in $\mathrm{m}^{3}$, determine the final volume and pressure of the system.
(08 Marks)

## Module-2

3 a. State the first law of thermodynamics for a closed system undergoing change of state. Explain the property introduced by this law.
(04 Marks)
b. What are the limitations of first law of thermodynamics?
(04 Marks)
c. A stationary fluid system goes through a following cycle:

Process 1-2 isochoric heat addition of $235 \mathrm{~kJ} / \mathrm{kg}$
Process 2-3 adiabatic expansion to its original pressure with loss of $70 \mathrm{~kJ} / \mathrm{kg}$ in internal energy.
Process 3-1 isobaric compression to its original volume with heat rejection of $200 \mathrm{~kJ} / \mathrm{kg}$ Prepare a balance sheet of energy quantities.
(12 Marks)

## OR

4
a. Define the following:
i) Thermal Energy Reservoir (TER)
ii) Mechanical Energy Reservoir (MER).

b. Show that efficiency of a reversible engine is independent of the nature or amount of the working substance going through the cycle.
(06 Marks)
c. An inventor claims that his engine has the following specifications:

Heating value of the fuel
: $74500 \mathrm{~kJ} / \mathrm{kg}$
Temperature limits $\quad: 750^{\circ} \mathrm{C}$ and $25^{\circ} \mathrm{C}$
Power developed $: 75 \mathrm{~kW}$
Fuel burnt $\quad: 0.07 \mathrm{~kg} / \mathrm{min}$
State whether claim is valid or not.
(10 Marks)

## Module-3

5 a. Explain the conditions for reversibility.
(06 Marks)
b. Show that heat transfer through a finite temperature difference is irreversible.
(06 Marks)
c. Determine the entropy change of 4 kg of a perfect gas whose temperature varies from $127^{\circ} \mathrm{C}$ to $227^{\circ} \mathrm{C}$ during a constant volume process. The specific heat varies linearly with absolute temperature and is given by the relation $\mathrm{C}_{\mathrm{v}}=(0.48+0.0096 \mathrm{~T}) \mathrm{kJ} / \mathrm{kg} \mathrm{K}$.
(08 Marks)

## OR

6 a. Define entropy and show that entropy is a property of system.
(06 Marks)
b. Write the criteria of reversibility, irreversibility and impossibility to a thermodynamic cycle.
(06 Marks)
c. A Carnot engine absorbs 200J of heat from a reservoir at the temperature of the normal boiling point of water and rejects heat to a reservoir at the temperature of the triple point of water. Find the heat rejected, the work done by the engine and the thermal efficiency.
(08 Marks)

## Module-4

7 a. Define the following:
i) Thermodynamic dead state
ii) Energy
iii) Second law efficiency.
(06 Marks)
b. Energy is always conserved, but its quality is always degraded. Explain.
(04 Marks)
c. Prove that, $\eta_{\text {II }}=\frac{\eta_{I}}{\eta_{\text {carnot }}}$
(10 Marks)

## OR

8 a. Draw the phase equilibrium diagram on P-V coordinate for a pure substance, whose volume decreases on melting.
(04 Marks)
b. State whether the following samples of steam are wet, dry or superheated: Justify your answer.
i) Temperature $=200^{\circ} \mathrm{C}$, , pressure $=1.2 \mathrm{MPa}$
ii) Pressure $=1 \mathrm{MPa}$ volume $=0.235 \mathrm{~m}^{3} / \mathrm{kg}$
iii) Pressure $=500 \mathrm{kPa}$ enthalpy $=2530 \mathrm{~kJ} / \mathrm{kg}$
iv) Temperature $=100^{\circ} \mathrm{C}$ entropy $=7.35 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$
(08 Marks)
c. What is dryness fraction of steam? Explain the method of estimating quality of wet steam by a combined separating and throttling calorimeter.
(08 Marks)

## Module-5

9 a. State 'Dalton's law of partial pressure'
b. Define the following terms:

17ME33
i) Saturated air
ii) Wet bulb temperature
iii) Specific humidity
iv) Dew point temperature.
(04 Marks)
c. A mixture of gas has the following volumetric analysis. $\mathrm{O}_{2}=30 \%, \mathrm{CO}_{2}=40 \%, \mathrm{~N}_{2}=30 \%$. Determine:
i) The analysis on a mass base.
ii) The partial pressure of each component if the total pressure is 100 kPa and temperature is $32^{\circ} \mathrm{C}$.
iii) The molecular weight of mixture.
(12 Marks)

## OR

10 a. What is the generalized compressibility chart? Explain.
(04 Marks)
b. Write the Vander Waal's equation of state. In what ways, it is an improvement over the ideal gas equation of state.
(04 Marks)
c. One kg-mol of oxygen undergoes a reversible non-flow isothermal compression and the volume decreases from $0.2 \mathrm{~m}^{3} / \mathrm{kg}$ to $0.08 \mathrm{~m}^{3} / \mathrm{kg}$ and the initial temperature is $60^{\circ} \mathrm{C}$. If the gas obeys Vander Waal's equation find: i) the work done during the process ii) the find pressure.
